

Small Cap Quality Value Portfolio

Fourth Quarter 2018

Portfolio Review

The Small Cap Quality Value portfolio outperformed the Russell 2000 Value Index during the fourth quarter. Performance was driven by strong stock selection in the producer durables and materials & processing sectors. Gains were partially offset by an underweight in utilities and weak stock selection in technology.

Positions that contributed most positively to performance during the quarter were WD-40 Company and Cass Information Systems.

- WD-40 reported a strong quarter of sales growth and margins in an environment of heightened cost inflation across the consumer staples sector. Raw material inflation had only a small impact on the company's high margins because of prior and current price increases. We remain owners and believe the business can continue growing by introducing new products, driving international penetration, and exercising its pricing power as the only significant recognizable brand in its category.
- Cass' recent quarterly results benefited from the uptick in domestic trucking activity, in which both the cost and the number of shipments increased. Cass is paid both on the number and size of the invoices it processes, so the current environment remains favorable. In addition, as interest rates rise, the company will earn additional income on the funds held within its banking subsidiary. Given the favorable operating environment and Cass' entrenched position as the largest trucking invoice processor, we remain owners of the business.

Positions that detracted the most from performance were Core Laboratories and National Beverage.

- The decline in oil prices has muted international and offshore drilling activity, which has hurt Core Lab's current results and near-term outlook.
- In October, a law firm filed a class-action suit against National Beverage alleging that LaCroix, the highest growth brand of the business, is not all natural and contains harmful artificial ingredients. Nielsen data has shown that the months following the lawsuit have seen a near-term deceleration in the growth rate of LaCroix, impacting the stock price. Our research found the ingredients in question are not harmful expect in unreasonably large quantities. We remain owners of the business because of the continued significant opportunity for sparkling flavored water to take share from sugary soft drinks

Purchases and Sales

There were no new purchases or complete sales during the fourth quarter.

Outlook

There is a clear disconnect between the market's view of 2019-2020 economic growth and the Federal Reserve's. Equity, bond and commodity investors are pricing in much slower growth—perhaps even a recession—into this year and the next. The Fed, on the other hand, is looking at current conditions, which are primarily still solid. Markets will perform better when these two points of view converge.

We agree more with the market than with the Fed about 2019 growth prospects. Economic growth will be much slower than in 2018 but still positive—our best guess is in the 1.5%-to-2% range—and the S&P 500 Index will be able to grow earnings-per-share in the 5%-to-8% range. Equity returns may actually exceed profit growth as confidence gets restored in the sustainability of the corporate-profit outlook.

We cannot pinpoint where material excesses are in the global economy that could cause a recession over the next year or two. Yet after meaningful declines in markets over the last three months, we see that it is going to take some time to restore confidence among investors and that companies are going to have to prove that they can deliver positive earnings growth even in a slower-growth economy.

Timing the stock market is an impossible task even for seasoned professionals. We emphasize the importance of staying focused on long-term goals to help stomach the inevitable short-term volatility associated with investing.

*A consequence of our high-quality investment philosophy is that certain sectors do not meet our financial criteria and offer fewer investable ideas. Our portfolios therefore will likely have persistently low exposure to those segments of the economy (and therefore may cause our sector weights to be outside of the 10% threshold relative to the benchmark). Companies operating in these areas produce consistently low or no profitability, are capital intensive, are heavily indebted, or have overly complex balance sheet structures. These may include large sectors such as Financials (real estate and banking) and also smaller sectors such as Health Care (biotechnology) Materials & Processing (chemicals, metals and mining), Energy (oil and gas), and Utilities where we will have little to no exposure.

Small Cap Quality Value Portfolio

Fourth Quarter 2018

Disclosure

Kayne Anderson Rudnick Investment Management, LLC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. Kayne Anderson Rudnick Investment Management, LLC has been independently verified for the period from January 1, 1999 through December 31, 2017.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS® standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS® standards. The Small Cap Quality Value Composite has been examined for the period from January 1, 1999 through December 31, 2017. The verification and performance examination reports are available upon request.

Kayne Anderson Rudnick Investment Management, LLC, a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. Kayne Anderson Rudnick Investment Management, LLC manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary institutional and pooled Small Cap Quality Value Portfolios. Small Cap Quality Value Portfolios are invested in equity securities with capitalizations consistent with the Russell 2000® Value Index, that have market control, rising free cash flow,

shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Value Index. The Russell 2000® Value Index is a market capitalization-weighted index of value-oriented stocks of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of independent verifiers. The composite was created in June 1998. Previously, only institutional accounts were included. A list of composite descriptions and policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request.

Prior to January 1, 2011, the composite minimum was \$250,000. As of January 1, 2011, the composite was redefined to include both institutional and mutual fund [or pooled] accounts. Prior to January 1, 2011, accounts that experienced a significant cash flow, defined as aggregate flows that exceeded 25% of the account's beginning of period market value, were temporarily removed from the composite.

The standard management fee schedule currently in effect is as follows: 1.00% for the first \$25 million; 0.80% on the next \$25 million; 0.70% on the balance. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results.

Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using gross returns) and the benchmark for the 36-month period ended at the following dates:

3-Yr Annualized Standard Deviation (%)

	December 31	Composite	Benchmark
2011		21.64	26.42
2012		16.24	20.17
2013		14.50	16.05
2014		13.06	12.98
2015		13.94	13.65
2016		14.30	15.72
2017		12.32	14.17

Year	Total Firm Assets (\$ millions)	Total Composite Assets (\$ millions)	Accounts at Year End	Gross Annual Return (%)	Net Annual Return (%)	Russell 2000® Value Index Annual Return (%)	Internal Dispersion
