

## Small Cap Sustainable Growth Portfolio

### First Quarter 2021

### Portfolio Review

The Small Cap Sustainable Growth portfolio underperformed the Russell 2000 Growth Index in the first quarter as more cyclical, lower quality names outperformed. Poor stock selection in information technology and poor stock selection and an overweight in communication services detracted from performance. An underweight in health care and utilities contributed positively to performance.

The biggest contributors to performance during the quarter were Fox Factory and Interactive Brokers Group. Fox Factory continues to benefit from the consumer's renewed or newly formed interest in outdoor activities where the company participates. Looking through the cyclicity driven by interest rates, Interactive Brokers continues to see through-the-cycle client account growth by increasing client account share and providing value via its automated platform. Other top contributors included Ollie's Bargain Outlet, Aspen Technology and Omega Flex.

The biggest detractors to performance were BlackLine and Avalara. Many businesses paused back office investing during the pandemic. Given that BlackLine sells transformational accounting software, the shares suffered during the period. Nonetheless, we believe the company's pipeline is improving and its offering for the mid-market has been resonating with consumers as these solutions are typically easier to implement and generate immediate value for customers. While Avalara reported strong quarter-end results, the broad market rotation from growth to value pressured the company's stock. Other bottom contributors included Rightmove, Paycom Software and MediaAlpha.

### Purchases and Sales

During the quarter, we purchased Olo. There were no complete sales from the portfolio. Olo is an ecommerce platform for restaurants. The platform powers a restaurant's website or app and routes customer orders directly into the restaurant Point of Sale (POS) system. Additional products help restaurant operators to manage deliveries as well as present a unified presence on delivery marketplaces, such as Door Dash and Uber Eats. The company charges a small monthly subscription fee for each restaurant and a small fixed transaction fee for each order. It also charges the marketplace participants for each transaction. The company processes 1.8 million orders per day. In our view, a competitor would have to create an equivalent product for an even lower price to compete with Olo, and even then, we think most restaurants would be unlikely to switch for fear of interrupting operations.

### Outlook

We believe the 2021/2022 economic outlook is becoming increasingly robust given significant pent-up consumer demand combined with record net worth, several trillion dollars of federal stimulus being distributed this year, vaccinations, and declining COVID-19 hospitalizations, all of which are improving consumer confidence. In a rapidly accelerating economic growth environment, low quality stocks tend to outperform high quality businesses as investors seek out companies with more operating and financial leverage. In our experience, equity markets are often 6 to 12 months ahead in assessing the business and economic environment. Once the acceleration in GDP starts to stabilize, we expect the relative performance of high-quality stocks will start to improve.

### Portfolio Highlights

**Style:** Small Cap  
**Sub-Style:** Growth  
**Index:** Russell 2000® Growth  
**Portfolio Inception:** 1998  
**Portfolio Assets:** \$9,987.3 M  
**Portfolio Turnover:** 25%–35%

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2019.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS® standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS® standards. The Small Cap Sustainable Growth Composite has been examined for the period from January 1, 1999 through December 31, 2019. The verification and performance examination reports are available upon request.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary institutional and pooled Small Cap Sustainable Growth Portfolios. Small Cap Sustainable Growth

Portfolios are invested in equity securities with market capitalizations in line with the Russell 2000® Growth Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Growth Index. The Russell 2000® Growth Index is a market capitalization-weighted index of growth-oriented stocks of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The composite was created in January 1998. A list of composite descriptions and policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request.

As of January 1, 2011, the composite was redefined to include both institutional and mutual fund [or pooled] accounts. Previously, only institutional accounts were included. Prior to January 1, 2011, the composite minimum was \$250,000, and accounts that experienced a significant cash flow, defined as aggregate flows that exceeded 25% of the account's beginning of period market value, were temporarily removed from the composite.

The standard management fee schedule currently in effect is as follows: 1.00% for the first \$25 million;

0.80% on the next \$25 million; 0.70% on the balance. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using gross returns) and the benchmark for the 36-month period.
