

Global Small Cap Portfolio

First Quarter 2023

Market Review

After a year of historic double-digit losses in both equities and fixed income in 2022, stocks and bonds delivered positive returns in the first quarter of 2023. The S&P 500 Index returned 7.50% and the Bloomberg U.S. Aggregate Bond Index returned 2.96%, a solid start for both benchmarks. Growth stocks, led primarily by mega-cap technology stocks, dramatically outperformed value stocks as evidenced by the Russell 1000 Growth Index increasing 14.37% versus the Russell 1000 Value Index return of 1.01%. The highest contributors to equity returns in the S&P 500 Index in the first quarter included mega-cap technology companies such as Apple, Microsoft, NVIDIA, Tesla, and Meta. Small capitalization and emerging market stocks lagged the S&P 500 with the Russell 2000 Index returning 2.74% and the MSCI Emerging Markets Index returning 3.96% in the quarter.

Portfolio Review

The Global Small Cap Core portfolio outperformed the MSCI All Country World Small Cap Index in the first quarter. Good stock selection and an overweight in communication services and industrials contributed positively to performance. An overweight in financials and an underweight in consumer discretionary detracted from performance. From a geographic perspective, good stock selection in the U.S. and good stock selection and an overweight in the U.K. contributed positively to performance. Poor stock selection in Japan and Europe ex. U.K. detracted from performance.

The biggest contributors to performance during the quarter were FTI Consulting and Primerica. FTI Consulting experienced strong revenue and earnings growth this quarter and provided a favorable outlook for 2023, driving the share price higher. We believe that the company remains offensive by investing in talent, its primary competitive asset, particularly as large competitors pull back hiring. Normalizing trends in claims and persistency rates following the pandemic led to higher profitability at Primerica, which more than offset weak results in the investment segment brought on by stock market volatility. Other top contributors included Auto Trader, Duck Creek Technologies, and Simpson Manufacturing.

The biggest detractors from performance during the quarter were Bank of Hawaii and First Hawaiian. Bank of Hawaii's shares, like other regional banks, came under pressure late in the quarter as investors became concerned about deposit outflows after the failure of Silicon Valley Bank and Signature Bank. We believe the bank has a strong deposit franchise as evidenced by the fact that over 70% of deposit accounts have been with the bank for over 10 years, and nearly 50% have been with the bank for over 20 years. Similar to Bank of Hawaii and other regional banks, First Hawaiian's shares came under pressure late in the quarter as investors became concerned about deposit outflows after the failure of Silicon Valley Bank and Signature Bank. We believe the bank has a strong deposit franchise as evidenced by the long tenure of its deposit accounts and consistent deposit market share over many years in Hawaii. Other bottom contributors included ServisFirst Bancshares, Enento Group, and Pason Systems.

Portfolio Highlights

Style: Small Cap
Index: MSCI® ACWI Small Cap Index
Portfolio Inception: 2016
Portfolio Assets: \$149.5 M*
Portfolio Turnover: 25%–35%
Number of Holdings: 40–50

Investment Philosophy

We believe that purchasing high-quality businesses with competitive protections at attractive valuations will achieve excess returns over a complete market cycle.

Investment Objectives

- To achieve a return meaningfully above that of the MSCI® ACWI Small Cap Index
- To achieve this return objective with a portfolio that exhibits lower overall risk characteristics

* KAR utilizes the interquartile method when calculating TD/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics.

Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information.

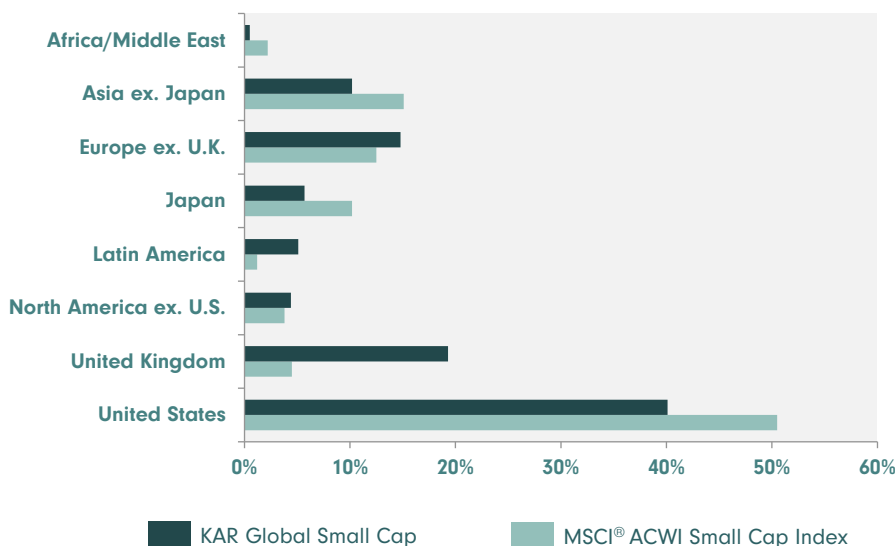

Holdings are subject to change. Holdings and weightings are based on a representative portfolio. Individual Investors' holdings may differ slightly. The sector information represented above is based on GICS sector classifications. Data is obtained by FactSet Research Systems and is assumed to be reliable.

As of March 31, 2023

The eVestment Global Small Cap Universe includes 39 managers categorized in the global small cap asset class by eVestment. KAR does not pay any fees to be included in the eVestment Global Small Cap Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2021.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Global Small Cap Composite has had a performance examination for the period from January 1, 2016 through December 31, 2021. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of

skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary institutional Global Small Cap Portfolios. Global Small Cap Portfolios are invested in equity securities with market capitalizations in line with the MSCI® ACWI Small Cap Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the MSCI® ACWI Small Cap Index (net). The MSCI® ACWI Small Cap Index is a market capitalization-weighted index of small-capitalization stocks of the MSCI® Global Investable Market Indices Universe. The index is calculated on a total-return basis with dividends reinvested, net of withholding taxes. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is January 2016. The composite was created in January 2016. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

The model management fee used for the net returns in this table is 0.90% for all periods presented. The standard management fee schedule currently in effect is as follows: 0.90% for

the first \$50 million; 0.80% on the next \$50 million; 0.70% on the next \$100 million; 0.60% on the balance. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of withholding taxes, net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation, which measures the variability of the composite (using gross returns) and the benchmark for the 36-month period, is not presented for periods prior to 2018 because 36 monthly composite returns are not available.

GLOSSARY: Alpha: A risk-adjusted measure of an investment's excess return relative to a benchmark. Sharpe Ratio: A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. Information Ratio: The information ratio (IR) is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. Beta: A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. Downside Capture Ratio: A statistical measure of an investment manager's overall performance in downmarkets. It is used to evaluate how well an investment manager performed relative to an index during periods when that index has dropped. Tracking Error: The divergence between the price

behavior of a position or a portfolio and the price behavior of a benchmark. It is reported as a standard deviation percentage difference, which reports the difference between the return an investor receives and that of the benchmark they were attempting to imitate.

INDEX DEFINITION: The MSCI® ACWI Small Cap Index is a free float-adjusted market capitalization-weighted index that measures small cap equity performance of developed and emerging markets. The index is calculated on a total return basis with net dividends reinvested. The index is calculated on a total return basis with net dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
