

Mid Cap Core Portfolio

First Quarter 2023

Portfolio Review

The Mid Cap Core portfolio outperformed the Russell Midcap Index in the first quarter. Good stock selection and an overweight in information technology and good stock selection in consumer staples contributed positively to performance. Poor stock selection and an underweight in consumer discretionary and an underweight in communication services detracted from performance.

The biggest contributors to performance during the quarter were West Pharmaceutical and Monolithic Power Systems. West Pharmaceutical Services was previously hurt by declining sales from its COVID-related business, and it also had to reconfigure equipment for new products. That transition is largely complete and new design wins on the company's highest margin products appear to be sustaining earnings growth. In the most recent quarter, Monolithic Power Systems reported stabilization in order patterns amidst a semiconductor industry downturn and assuaged investors on risks related to geopolitical tensions between the U.S. and China. This, combined with a favorable outlook for 2023 and improving sentiment in technology stocks, caused the shares to react favorably. Other top contributors included Lamb Weston, Dolby Laboratories, and Zebra Technologies.

The biggest detractors from the portfolio during the quarter were Azena and Globus Medical. Azena reported a mixed quarter. Gene Synthesis continues to be a weak spot for the business. The company also had higher revenue from COVID-related demand that has declined and impacted results. The core business of automated stores and storage remains healthy, and management is working on cost controls and cuts in its operations to improve profitability. We believe this should lead to more sustainable earnings growth. During the first quarter, Globus Medical announced a \$3.1 billion acquisition. We exited the position as we believed there were challenges to integrate the two businesses. Other bottom contributors included POOLCORP, W. R. Berkley, and Ross Stores.

Purchases and Sales

During the quarter, we purchased POOLCORP and we sold Globus Medical and SiteOne Landscape Supply. POOLCORP is the world's largest wholesale distributor of swimming pool supplies, equipment, and related leisure products, with approximately 120,000+ customers around the world. The company carries more than 200,000 products across more than 50 product categories from over 2,200 suppliers. We sold Globus Medical due to its announcement to acquire a peer in an all-stock deal. While the peer company does operate in Globus's spine markets, the quality of the business, in our opinion, is far inferior to Globus. It has a volatile history of profitability with operating margins half of those of Globus and the corporate culture seems more marketing driven than technology driven. The management team also has turned over several times with a track record of heavy M&A with high leverage on the balance sheet. We believe this deal has considerable integration risks as well as potentially becoming dilutive to Globus' return on capital. We sold SiteOne Landscape Supply to purchase POOLCORP. POOLCORP was purchased at a much lower valuation than SiteOne and is a name we have owned for many years in other portfolios.

Outlook

Perceived safe havens and quality stocks performed well in the first quarter as investors have continued to grapple with high uncertainty in the market outlook. We came into 2023 with clear consensus among investors that the year would bring at least a mild recession. January data was stronger than expected and the market quickly priced in a "no landing" scenario. February data was somewhat weaker, and the market started to price in a "soft landing" outcome. Then a regional bank crisis emerged, and the market started to price in a "hard landing" scenario. Fortunately, banking fears started to dissipate the last two weeks of the quarter. Multiple cross currents in interest rates, inflation, economic growth, and investor sentiment have made for a difficult forecasting environment for investors. While the short-term outlook is somewhat murky, we believe that the long-term outlook should be attractive. Cash is piling up on the sidelines, investors are generally negative, speculation is absent from equities (IPOs, SPACs, and memes are dormant), and businesses are very cautious in hiring and expansion plans. Historically, these types of conditions have led to meaningful long-term investing outcomes, although it will remain to be seen how markets will respond for the remainder of 2023.

*KAR utilizes the interquartile method when calculating TD/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics.

†Free cash flow data is as of December 31, 2022. Prices are as of March 31, 2023. Excludes financials.

‡January 1, 2000. Standard deviation for the KAR strategy is based on net-of-fee returns.

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2021.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Mid Cap Core Composite has had a performance examination for the period from January 1, 2000 through December 31, 2021. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the

firm defines as high quality.

The composite includes all fully discretionary institutional and pooled Mid Cap Core Portfolios. Mid Cap Core Portfolios are invested in equity securities with market capitalizations consistent with the Russell Midcap® Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell Midcap® Index. The Russell Midcap® Index is a market capitalization-weighted index of the 800 smallest companies in the Russell 1000® Index, which comprises the 1,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is January 2000. The composite was created in January 2000. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

The model management fee used for the net returns in this table is 1.30% for all periods presented. The standard Institutional management fee schedule currently in effect is as follows: 0.75% for the first \$25 million; 0.65% on the next \$25 million; 0.55% on the next \$50 million; 0.50% on the balance. The maximum Wealth Advisory Services Fee in effect is 1.30% for all assets, which breaks out as follows: 1.00% for the first \$3 million; 0.80% on the

next \$2 million; 0.70% on the next \$5 million; 0.60% on the balance; with an additional 0.30% for any assets invested in separately managed accounts strategies. The standard investment advisory fee schedule currently in effect for clients not engaging in Wealth Advisory Services is 1.00%. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using gross returns) and the benchmark for the 36-month period.

GLOSSARY

Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Information Ratio:** The information ratio (IR) is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **Downside Capture Ratio:** A statistical measure of an investment manager's overall performance in down-markets. It is used to evaluate how well an investment manager performed relative to an index during periods when that index has dropped.

Tracking Error: The divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. It is reported as a standard deviation percentage difference, which reports the difference between the return an investor receives and that of the benchmark they were attempting to imitate.

INDEX DEFINITION

The Russell Midcap® Index is a market capitalization-weighted index of medium-capitalization stocks of U.S. companies. The index is calculated on a total return basis with dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
