

Mid Cap Core Portfolio

First Quarter 2024

Portfolio Review

The Mid Cap Core portfolio underperformed the Russell Midcap Index in the first quarter. Poor stock selection in industrials and information technology detracted from performance. An underweight in real estate and communication services contributed positively to performance.

The biggest contributors to performance during the quarter were AMETEK and Domino's Pizza.

- AMETEK's shares outperformed in the quarter after posting solid financials with organic growth boosted by the company's ability to maintain pricing in this inflationary environment. In addition, we believe demand continues to be strong even with the pricing adjustments.
- Domino's Pizza continues to benefit from executing well in its everyday business and returning delivery service levels back to pre-COVID levels. Additionally, the business experienced positive sales and transaction levels for its U.S. delivery and carryout business.
- Other top contributors included Brown & Brown, West Pharmaceutical Services, and W. R. Berkley.

The biggest detractors to performance during the quarter were Azenta and Exponent.

- Azenta reported results that were ahead of expectations, most notably for-profit margin expansion. However, guidance for next quarter was muted due to the timing from an acquisition with inconsistent revenue.
- Exponent's shares underperformed in the quarter due to further weakness in consumer electronics and postponements of projects in other areas such as chemicals litigation due to client budget sensitivities leading to disappointing financial guidance for the following year. In addition, expense normalization is expected to pressure profitability.
- Other bottom contributors included Aspen Technology, Teledyne Technologies, and FactSet Research Systems.

Purchases and Sales

During the quarter, there were no new purchases. We sold our position in Dolby Laboratories to fund increases in Equifax and Westinghouse Air Brake Technologies (Wabtec). We believe these two positions offer strong risk-reward metrics over the long-term.

Outlook

One large challenge coming out of the pandemic is trying to parse the underlying strength in the economy. Our supply chains were whipsawed, our employment patterns changed dramatically, and we saw unprecedented monetary and fiscal support. Given these factors, it is hard to gauge how much of the strength in the U.S. economy is due to fundamentals versus other exogenous effects. And while interest rates have increased materially in a short period of time, they are only modestly restrictive compared to the long-run average. As a result of low rates and strong government support during the pandemic, we believe the tide lifted all companies and made it easier for everyone to prosper. However, without this assistance, we expect that more fundamental factors will drive corporate profits and thus equity performance going forward. Assuming less exogenous support, we believe companies who are competitively advantaged with better profitability, cash flow, as well as lower leverage will be able to better distinguish themselves going forward.

*KAR utilizes the interquartile method when calculating Debt/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics. Debt/EBITDA utilizes net debt for the calculation.

[†]Free cash flow data is as of December 31, 2023. Prices are as of March 31, 2024. Excludes financials.

[‡]January 1, 2000. Standard deviation for the KAR strategy is based on net-of-fee returns.

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

[†]All periods less than one year are total returns and are not annualized. Returns are final. Returns could be reduced, or losses incurred, due to currency fluctuations.

[‡]Net of all fees and expenses. Assumes a 0.75% annual fee. Fees presented on the Disclosure page could vary from the assumed fee in the net-of-fee calculation, as actual fees paid by a particular client account differ depending on a variety of factors including, but not limited to, business unit and size of mandate. The fee used on the Disclosure page utilizes an assumed maximum fee across the firm's business units, which is further detailed on that page.

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Returns of the Kayne Anderson Rudnick composite are final. For further details on the composite, please see the disclosure statement in this presentation. Data is obtained from FactSet Research Systems and is assumed to be reliable. **Past performance is no guarantee of future results.**

Peer Comparison Chart

Ten Years Ending March 31, 2024

● KAR Mid Cap Core ● Russell Midcap[®] Index

The eVestment Mid Cap Core Universe includes 44 managers categorized in the mid cap core asset class by eVestment. KAR does not pay any fees to be included in the eVestment Mid Cap Core Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2023.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Mid Cap Core Composite has had a performance examination for the period from January 1, 2000 through December 31, 2023. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary institutional and pooled Mid Cap Core Portfolios. Mid Cap Core Portfolios are invested in equity securities with market capitalizations consistent with the Russell Midcap® Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell Midcap® Index. The Russell Midcap® Index is a market capitalization-weighted index of the 800 smallest companies in the Russell 1000® Index, which comprises the 1,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is January 2000. The composite was created in January 2000. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

The model management fee used for the net returns in this table is 1.30% for all periods presented. The standard Institutional management fee schedule currently in effect is as follows: 0.75% for the first \$25 million; 0.65% on the next \$25 million; 0.55% on the next \$50 million; 0.50% on the balance. The maximum Wealth Advisory Services Fee in effect is 1.30% for all assets, which breaks out as follows: 1.00% for the first \$3 million; 0.80% on the next \$2 million; 0.70% on the next \$5 million; 0.60% on the balance; with an additional 0.30% for any assets

invested in separately managed accounts strategies. The standard investment advisory fee schedule currently in effect for clients not engaging in Wealth Advisory Services is 1.00%. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using gross returns) and the benchmark for the 36-month period.

GLOSSARY

Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Information Ratio:** The information ratio (IR) is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **Downside Capture Ratio:** A statistical measure of an investment manager's overall performance in down-markets. It is used to evaluate how well an investment manager performed relative to an index during periods when that index has

dropped. **Tracking Error:** The divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. It is reported as a standard deviation percentage difference, which reports the difference between the return an investor receives and that of the benchmark they were attempting to imitate.

INDEX DEFINITION

The Russell Midcap® Index is a market capitalization-weighted index of medium-capitalization stocks of U.S. companies. The index is calculated on a total return basis with dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
