

Global Dividend Yield Portfolio

Second Quarter 2021

Portfolio Review

The Global Dividend Yield portfolio delivered positive performance in line with the MSCI World High Dividend Yield Index. Good stock selection in information technology and communication services contributed positively to performance. Poor stock selection and an underweight in health care and poor stock selection in consumer staples detracted from performance.

The biggest contributors to performance during the quarter were BCE and Royal Bank of Canada. BCE continues to produce strong results, with net adds across all of its key businesses. The dividend was recently increased, continuing the company's multi-year track record of increasing the dividend annually. Royal Bank of Canada's strength in capital markets and wealth management, as well as the reversal of provisions taken during the early stages of COVID-19, contributed to strong performance during the quarter. Other top contributors included IBM, Leggett & Platt and Spark New Zealand.

The biggest detractors to performance were Patterson Companies and Verizon Communications. Patterson's guidance for its upcoming fiscal year disappointed some investors. However, we believe the guidance represents strong growth off of the company's pre-COVID-19 levels in 2019, and that the company is performing well in the marketplace. Concerns about the cost of 5G spectrum and the competitive environment weighed on Verizon's shares during the quarter. However, these concerns surface every so often in the wireless space and we believe that Verizon is well positioned to once again manage through this period. Other bottom contributors included Bank of Hawaii, Tokio Marine and Zurich Insurance Group.

Purchases and Sales

During the quarter, we purchased Terna and Unilever. We sold our positions with AT&T, Danone, NextEra Energy and Organon &Co.

Outlook

Despite elevated valuations, we believe investors should stay the course and remain invested. Price/earnings (PE) ratios are higher than normal, but this is not unusual when earnings are rapidly recovering and corporate earnings were strong in the first quarter. Ironically, PE ratios may decline as the earnings recovery unfolds. However, as long as earnings growth exceeds multiple contractions, we believe returns should be favorable for investors. As always, our focus remains on high quality businesses regardless of the current economic regime. We believe competitive protections and differentiation are the key investment metrics that matter the most over the long term.

The MSCI® World High Dividend Yield Index is a trademark/service mark of MSCI®. MSCI® is a trademark of MSCI Inc.

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2019.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS® standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS® standards. The Global Dividend Yield Composite has been examined for the period from January 1, 2014 through December 31, 2019. The verification and performance examination reports are available upon request.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary institutional and pooled Global Dividend Yield

Portfolios. Global Dividend Yield Portfolios are invested in globally diversified securities of high-quality, mature companies with high dividend yields. For comparison purposes, the composite is measured against the MSCI® World High Dividend Yield Index (net). The MSCI® World High Dividend Yield Index is designed to reflect the performance in the MSCI® World Index (excluding REITs) with higher dividend income and quality characteristics than average dividend yields that are both sustainable and persistent. The benchmark was changed retroactively effective January 2019, as the previous benchmark was discontinued December 2018. Benchmark returns are not covered by the report of the independent verifiers. The composite was created in January 2012. A list of composite descriptions and policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request.

Non-fee-paying portfolios represent 100% of the composite assets at year-end 2012, 60% at year-end 2013, 4% at year-end 2014, 2% at year-end 2015, and < 1% at year-end from 2016 through 2019.

The standard management fee schedule currently in effect is as follows: 0.70% for the first \$10 million; 0.55% on the next \$25 million; 0.45% on the next \$50 million; 0.35% on the balance. Actual management fees charged may vary depending

on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation, which measures the variability of the composite (using gross returns) and the benchmark for the 36-month period, is not presented for periods prior to 2014 because 36 monthly composite returns are not available.
