

## Global Dividend Yield Portfolio

Second Quarter 2022

### Portfolio Review

The Global Dividend Yield portfolio outperformed the MSCI World High Dividend Yield Index in the second quarter. Good stock selection and an underweight in information technology and good stock selection in materials contributed positively to performance. An underweight in health care and consumer staples detracted from performance.

The biggest contributors to performance during the quarter were Amcor and IBM. Amcor's packaging business is benefiting from resilient demand and pricing power. IBM is seeing strong demand for its hybrid cloud-based software offerings. We believe the company's customers realize the importance of these offerings to their future success. Other top contributors included BAE Systems, Merck, and Safety Insurance Group.

The biggest detractors to performance were Omnicom and IGM Financial. Omnicom's stock was weak due to concerns about advertising spend during a potential recession. IGM Financial, a Canadian investment management company, has been negatively impacted by market declines. Other bottom contributors included BCE, Adecco, and Royal Bank of Canada.

### Purchases and Sales

During the quarter, we purchased Deutsche Post, Pinnacle West Capital and VF. There were no sales during the 2nd Quarter 2022.

### Outlook

Signs of an economic slowdown and/or a recession are becoming increasingly obvious. Starting with the consumer (70% of gross domestic product), we have seen material retail sales shortfalls at large retailers and consumer confidence has hit 40-year lows. New orders for the Purchasing Managers' Index have fallen below 50, which signals contraction. Raw materials, such as copper, aluminum, nickel, and zinc, have already experienced significant declines in price in the second quarter. Even the strongest sectors (oil and semiconductors) started to show significant weakness late in the quarter. This may suggest that the U.S. is already in at least a technical recession (two consecutive quarters of negative GDP), and the Fed may be closer than investors realize to bringing inflation under control. Regardless, we believe valuations have become attractive longer term. Many stocks have declined off their highs, and speculation in IPOs, SPACs, and meme stocks is non-existent which makes for a more favorable long-term investing environment. In our view, quality companies have started to perform better on a relative basis given the slowing environment and flattening yield curve.

### Portfolio Highlights

**Style:** Large Cap  
**Index:** MSCI® World High Dividend Yield Index  
**Portfolio Turnover:** 25%–45%

\*January 1, 2012

<sup>†</sup>All periods less than one year are total returns and are not annualized. Returns are preliminary. Returns could be reduced, or losses incurred, due to currency fluctuations.

<sup>†</sup>Net of all fees and expenses. Assumes a 0.70% annual fee. Fees presented on the Disclosure page could vary from the assumed fee in the net-of-fee calculation, as actual fees paid by a particular client account differ depending on a variety of factors including, but not limited to, business unit and size of mandate. The fee used on the Disclosure page utilizes an assumed maximum fee across the firm's business units, which is further detailed on that page.

<sup>§</sup>Performance statistics are based on gross of fee returns.

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Returns of the Kayne Anderson Rudnick composite are preliminary and gross of fees unless otherwise specified. For further details on the composite, please see the disclosure statement in this presentation. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. The Global Dividend Yield Universe includes all managers categorized in the global dividend focus asset class by eVestment. Data is obtained from FactSet Research Systems and is assumed to be reliable. **Past performance is no guarantee of future results.**

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2020.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. The Global Dividend Yield Composite has had a performance examination for the period from January 1, 2014 through December 31, 2020. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary institutional and pooled Global Dividend Yield Portfolios. Global Dividend Yield Portfolios are invested in globally diversified securities of high-quality, mature companies with high dividend yields. For comparison purposes, the composite is measured against the MSCI® World High Dividend Yield Index (net). The MSCI® World High Dividend Yield Index is designed to reflect the performance in the MSCI® World Index (excluding REITs) with higher dividend income and quality characteristics than average dividend yields that are both sustainable and persistent. The benchmark was changed retroactively effective January 2019, as the previous benchmark was discontinued December 2018. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is January 2012. The composite was created in January 2012. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

The model management fee used for the net returns in this table is 1.00% for all periods presented. The standard Institutional management fee schedule currently in effect is as follows: 0.70% for the first \$10 million; 0.55% on the next \$25 million; 0.45% on the next \$50 million; 0.35% on the balance. The maximum Wealth Advisory Services Fee in effect is 1.30% for all assets, which breaks out as follows: 1.00% for the first \$3 million; 0.80% on the next \$2 million; 0.70% on the next \$5 million; 0.60% on the

balance; with an additional 0.30% for any assets invested in separately managed accounts strategies. The standard investment advisory fee schedule currently in effect for clients not engaging in Wealth Advisory Services is 1.00%. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation, which measures the variability of the composite (using gross returns) and the benchmark for the 36-month period, is not presented for periods prior to 2014 because 36 monthly composite returns are not available.
