

Small Cap Growth Portfolio

Second Quarter 2025

Portfolio Review

The Small Cap Growth portfolio underperformed the Russell 2000 Growth Index in the second quarter. Poor stock selection in financials and poor stock selection and an underweight in industrials detracted from performance. Good stock selection and an underweight in health care and good stock selection in communication services contributed positively to performance.

The biggest contributors to performance during the quarter were Onestream and Auto Trader Group.

- We believe Onestream is executing well and benefitting from secular demand for its unified platform to modernize the finance function. Shares have recovered following a sell-off triggered by the current administration's tariff announcement and concerns over customers delaying purchases amid macroeconomic uncertainty.
- Auto Trader reported steady growth in its core marketplace business driven by pricing, product uptake, and a resilient used car market in the U.K. As we see it, the company continues to strengthen its competitive position while expanding its data and digital retailing offerings with customers.
- Other top contributors included Rightmove, Ollie's Bargain Outlet, and Dream Finders Homes.

The biggest detractors from performance during the quarter were Goosehead Insurance and Endava.

- Written premium growth was below recent trends due to moderating carrier rate increases in Goosehead's major geographies.
- Endava reported revenue and profit growth. However, shares declined after management reported that large deals in the pipeline slipped in the quarter due to clients' reactions to tariff uncertainty.
- Other bottom contributors included Enerpac Tool Group, Ryan Specialty, and ServisFirst Bancshares.

Purchases and Sales

During the quarter, there were no new purchases and we sold Fox Factory. As we see it, management's acquisitive behavior has taken Fox Factory into less appealing businesses with weaker competitive positions. Consequently, the resilience and profitability of the company's core suspension products business has been diluted and we believe the strength of the overall company has diminished. As a result, we sold our shares.

Outlook

At the peak of tariff terror (the low point for the market), we saw equity valuations normalize, particularly those of expensive technology shares. At that time, valuations ranged from fair to attractive, particularly for small cap stocks. As investors gained confidence that cooler heads would prevail in the tariff wars, we saw valuations bounce back materially. This is particularly true for the largest companies in the S&P 500 (i.e., the big tech firms leading the surge). With so much uncertainty both at home and abroad, it is hard to gauge whether higher valuations are likely to be justified with strong earnings growth. Earnings estimates have been sliding as the year has progressed, which is not unusual. But this does put more pressure on expectations for the end of 2025 and into 2026.

It is also possible that investor expectations for interest rate cuts support higher equity market valuations. We would caution though that the Fed's stance currently is that the economy is on solid enough footing that it does not need to cut rates. Should that change, and the Fed were forced to cut rates, that probably would not be positive for equity valuations overall.

Annualized Standard Deviation—Since Inception [‡]	18.7%	22.9%

*KAR utilizes the interquartile method when calculating Debt/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics. Debt/EBITDA utilizes net debt for the calculation.

[†]Free cash flow data is as of March 31, 2025. Prices are as of June 30, 2025. Excludes financials.

[‡]January 1, 1998. Standard deviation for the KAR strategy is based on net-of-fee returns. This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

[†]All periods less than one year are total returns and are not annualized. Returns are final. Returns could be reduced, or losses incurred, due to currency fluctuations.

[†]Net of all fees and expenses. Assumes a 0.90% annual fee. Fees presented on the Disclosure page could vary from the assumed fee in the net-of-fee calculation, as actual fees paid by a particular client account differ depending on a variety of factors including, but not limited to, business unit and size of mandate. The fee used on the Disclosure page utilizes an assumed maximum fee across the firm's business units, which is further detailed on that page.

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Returns of the Kayne Anderson Rudnick composite are final. For further details on the composite, please see the disclosure statement in this presentation. Data is obtained from FactSet Research Systems and is assumed to be reliable. **Past performance is no guarantee of future results.**

Peer Comparison Chart

Ten Years Ending June 30, 2025

The eVestment Small Cap Growth Universe includes 133 managers categorized in the small cap growth asset class by eVestment. KAR does not pay any fees to be included in the eVestment Small Cap Growth Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2024.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Small Cap Growth Composite has had a performance examination for the period from January 1, 1999 through December 31, 2024. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively

on securities the firm defines as high quality.

The composite includes all fully discretionary institutional and pooled Small Cap Growth Portfolios. Small Cap Growth Portfolios are invested in equity securities with market capitalizations in line with the Russell 2000® Growth Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Growth Index. The Russell 2000® Growth Index is a market capitalization-weighted index of growth-oriented stocks of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is January 1998. The composite was created in January 1998. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

The model management fee used for the net returns in this table is 1.30% for all periods presented. The standard Institutional management fee schedule currently in effect is as follows: 0.90% for the first \$25 million; 0.80% on the next \$25 million; 0.70% on the balance. The maximum Wealth Advisory Services Fee in effect is 1.30% for all assets, which breaks out as

follows: 1.00% for the first \$3 million; 0.80% on the next \$2 million; 0.70% on the next \$5 million; 0.60% on the balance; with an additional 0.30% for any assets invested in separately managed accounts strategies. The standard investment advisory fee schedule currently in effect for clients not engaging in Wealth Advisory Services is 1.00%. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using gross returns) and the benchmark for the 36-month period.

GLOSSARY

Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Information Ratio:** The information ratio (IR) is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **Downside Capture Ratio:** A statistical measure of an investment manager's overall performance in down-markets. It is used to evaluate how well an investment manager performed relative to an index during periods when that index has dropped. **Tracking Error:** The divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. It is reported as a standard deviation percentage difference, which reports the difference between the return an investor receives and that of the benchmark they were attempting to imitate.
