

Equity Income Portfolio

Third Quarter 2022

Portfolio Review

The Equity Income portfolio underperformed the MSCI USA High Dividend Yield Index in the third quarter. Poor stock selection and an underweight in consumer discretionary and poor stock selection in health care detracted from performance. Good stock selection in communication services and industrials contributed positively to performance.

The biggest contributors to performance during the quarter were Watsco and Kellogg. Unit growth and share gains continue to be meaningful for Watsco and price capture remains positive in the current inflationary environment. Kellogg reported decent results in a tough environment. The company's plan to separate into three separate companies was well received by investors, which contributed to strong performance. Other top contributors included Bank of Hawaii, Snap-On, and NextEra Energy.

The biggest detractors from the portfolio during the quarter were Verizon Communications and V.F. Verizon is dealing with intensified competition for consumer attention as the economy slows down. V.F. is a recent purchase that we sold at the end of September. The company's most profitable brand, Vans, is undergoing a significant restructuring and the brand has been more impaired than we initially believed. Other bottom contributors included IBM, Pfizer, and Amcor.

Outlook

We believe the plethora of bad news has led the stock market to a price level that already discounts a shallow-to-mild recession. However, simply put, equities will not bottom out until long-term bond yields (10 to 30 year) stop increasing. It was not a coincidence that stocks rallied from the middle of June until the middle of August when long-term yields were declining. We need a sustained decline in reported inflation statistics for this to happen. This seems likely at some point over the next six-to-twelve months. Monetary policy is working—raw material prices are falling (including oil); housing and autos are being hit hard (including used car prices and even new recently); semiconductors have turned from a shortage to a surplus in many areas; and many companies are starting to shed workers. Supply chain difficulties, which the Fed cannot directly control, are improving as well, but the Russian war and China's zero-COVID policy continue to create some supply difficulties. Given pessimistic investor sentiment, bearish positioning, and many attractively valued companies on a long-term basis, any better-than-feared news on the course of future interest rate increases could cause the markets to substantially improve from here. Historically, periods of stock market pessimism with zero speculation in them have been good long-term entry points for patient investors.

[†]All periods less than one year are total returns and are not annualized. Returns are preliminary.

[‡]Net of all fees and expenses. Assumes a 0.70% annual fee. Fees presented on the Disclosure page could vary from the assumed fee in the net-of-fee calculation, as actual fees paid by a particular client account differ depending on a variety of factors including, but not limited to, business unit and size of mandate. The fee used on the Disclosure page utilizes an assumed maximum fee across the firm's business units, which is further detailed on that page.

[§]Performance calculations are for the eight months ended December 31, 2020.

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Returns of the Kayne Anderson Rudnick composite are preliminary. For further details on the composite, please see the disclosure statement in this presentation. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. Data is obtained from FactSet Research Systems and is assumed to be reliable. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of

an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary institutional and pooled Equity Income Portfolios. Equity Income Portfolios are primarily invested in U.S. equity securities of high-quality companies that pay sustainable dividends. For comparison purposes, the composite is measured against the MSCI® USA High Dividend Yield Index (net). The MSCI® USA High Dividend Yield Index is designed to reflect the performance in the MSCI® USA Index (excluding REITs) with higher dividend income and quality characteristics than average dividend yields that are both sustainable and persistent. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is May 2020. The composite was created in May 2020. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

The standard management fee schedule currently in effect is as follows: 0.70% for the first \$10 million; 0.55% on the next \$25 million; 0.45% on the next \$50 million; 0.35% on the balance. Actual

management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year or for time periods less than one year, no dispersion measure is presented. The three-year annualized ex-post standard deviation, which measures the variability of the composite (using gross returns) and the benchmark for the 36-month period, is not presented because 36 monthly composite returns are not available.

INDEX DEFINITION

The MSCI® USA High Dividend Yield Index is based on the MSCI USA Index, its parent index, and includes large and mid cap stocks. The index is designed to reflect the performance of equities in the parent index (excluding REITs) with higher dividend income and quality characteristics than average dividend yields that are both sustainable and persistent. The index also applies quality screens and reviews 12-month past performance to omit stocks with potentially deteriorating fundamentals that could force them to cut or reduce dividends. The index is calculated on a total return basis with net dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
