

# Outsmarting Volatility During Retirement

*In our view, the retirement “playbook” is being rewritten. The quest for reliable income in retirement has become more complicated. Not only do we want to build the equivalent of a steady paycheck, we also need it to keep pace with inflation.*

## A DIFFERENT PATH WITH LOWER VOLATILITY EQUITIES

We believe one potential solution for creating a reliable income stream in retirement is the systematic withdrawal from an equity portfolio. But it has a catch: market volatility can severely disrupt smart planning. Big losses can get income off track—and keep it off track. From our perspective, in order to employ this technique effectively, it’s important to choose investments with the potential for steadier compounding.

Take the example of three different vehicles, two indexed and one actively managed: the Russell 2000 Index, S&P 500 Index, and the Kayne Anderson Rudnick (KAR) Small Cap Core portfolio. The chart below shows the results of all three going back to April 1992, the inception date of the KAR Small Cap Core strategy.

Since 1992, the KAR Small Cap Core strategy’s long-term performance is highlighted by fewer down years versus the broader equity markets—even during the “lost decade” of the 2000s. Specifically, during the period from inception, the Russell 2000 Index experienced ten annual losses, the S&P 500 experienced six annual losses, while KAR only had four (based on net of fee returns). As illustrated by the growth of a dollar chart, the steadier return stream of the KAR strategy resulted in a much larger ending value over time.

### A LESS VOLATILE SEQUENCE OF RETURNS

April 1, 1992–December 31, 2023

## KEY TAKEAWAYS

We believe there is a need to deploy quality equity portfolios to help fund retirement income.

Because equity markets are volatile, however, investors need to remain vigilant in choosing defensive or risk-mitigating strategies. KAR believes a focus on high-quality companies\* is an effective strategy for providing downside protection during volatile periods and over market cycles.

As we highlight on the next page, even when comparing various equity strategies, we think the one with better downside protection during falling markets is better positioned to help generate income in retirement, though it is important to note that past performance is no guarantee of future results.

### ANNUALIZED RETURNS

	KAR Small Cap Core (gross)	KAR Small Cap Core (net)	Russell 2000® Index
1 Year	33.95%	32.26%	16.93%
5 Years	20.08%	18.55%	9.97%
10 Years	16.06%	14.57%	7.16%

\*KAR defines a “high quality” business as one that possesses a durable competitive advantage and consequently has the ability to generate high and enduring profitability. “Lost Decade” reflects the time period between January 1, 2000 to December 31, 2009 when the S&P 500 Index posted its first negative “named” decade since inception of the index in 1926. “Lost Decade” returns are annualized. Chart reflects cumulative returns since the inception of the KAR Small Cap Core strategy, April 1, 1992 through December 31, 2023. The performance figures presented above are final and gross of fees unless otherwise specified. Any net of fees returns shown reflect the payment of investment management fees and in some instances, other fees and expenses, while any gross of fees returns shown do not. For any gross of fees returns shown, a client’s return will be reduced over time by the investment management fees and other expenses their account incurs over time as a client are compounded. KAR’s investment management fees are described in KAR’s Form ADV, Part 2A. Fees presented on the Disclosure page could vary from the assumed fee in the net-of-fee calculation, as actual fees paid by a particular client account differ depending on a variety of factors including, but not limited to, business unit and size of mandate. The fee used on the Disclosure page utilizes an assumed maximum fee across the firm’s business units, which is further detailed on that page. All periods less than one year are total returns for the noted timeframe and are not annualized. All rates of return include reinvested dividends and other earnings. Current performance may be lower or higher than the performance data shown. This material is deemed supplemental and complements the performance and disclosure presented on the last page and included in KAR’s strategy fact sheets available on [kayne.com](http://kayne.com). Data is obtained from systems believed by KAR to be reliable. To the extent actual performance results are shown in comparison to an index, the index is not actively managed and does not reflect the deduction of any investment management or other fees and expenses. While the securities comprising any such index are not identical to those in the composite, KAR believes this comparison may be useful in evaluating performance. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

The data in the next two tables exhibit the case of starting retirement at the onset of a prolonged bear market. In our view, a portfolio invested in high-quality companies offers a more consistent return pattern, including smaller drawdowns, and we believe it is better able to sustain a healthy retirement.

To further illustrate this point, we show the growth of \$1 million dollars based upon the returns of the KAR portfolio, the Russell 2000 Index, and the S&P 500 Index in the table below. Since January 1, 2000, the Russell 2000 Index experienced eight annual losses while KAR only had four (based on net of fee returns).

## STARTING RETIREMENT BEHIND THE 8-BALL

	KAR Small Cap Core (gross) (\$)	Return (%)	KAR Small Cap Core (net) (\$)	Return (%)	Russell 2000® Index (\$)	Return (%)	S&P 500® Index (\$)	Return (%)

Data is obtained from systems believed by KAR to be reliable. To the extent actual performance results are shown in comparison to an index, the index is not actively managed and does not reflect the deduction of any investment management or other fees and expenses. While the securities comprising any such index are not identical to those in the composite, KAR believes this comparison may be useful in evaluating performance. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

Based on the example above, even after a sharp market rebound in 2003 after an unlucky start, a more consistent return pattern matters: the S&P 500 resulted in a negative nest egg and the Russell 2000 only produced mediocre results, while the KAR Small Cap Core portfolio generated the needed income and left a larger nest egg to boot due to playing defense in the early choppy markets.

The Russell 2000® Index is a trademark/service mark of Frank Russell Company. Russell® is a trademark of Frank Russell Company.

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2022.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Small Cap Core Composite has had a performance examination for the period from January 1, 1999 through December 31, 2022. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all discretionary institutional and pooled Small Cap Core Portfolios. Small Cap Core Portfolios are invested in equity securities with market capitalizations consistent with the Russell 2000® Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Index. The Russell 2000® Index is a market capitalization-weighted index of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The

index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is April 1992. The composite was created in April 1992. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

The model management fee used for the net returns in this table is 1.30% for all periods presented. The standard Institutional management fee schedule currently in effect is as follows: 0.90% for the first \$25 million; 0.80% on the next \$25 million; 0.70% on the balance. The maximum Wealth Advisory Services Fee in effect is 1.30% for all assets, which breaks out as follows: 1.00% for the first \$3 million; 0.80% on the next \$2 million; 0.70% on the next \$5 million; 0.60% on the balance; with an additional 0.30% for any assets invested in separately managed accounts strategies. The standard investment advisory fee schedule currently in effect for clients not engaging in Wealth Advisory Services is 1.00%. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using gross returns) and the benchmark for the 36-month period.

The Russell 2000 Index is a market capitalization-weighted index of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The S&P 500 Index is a free-float market capitalization-weighted index of 500 of the largest U.S. companies. The indexes are calculated on a total return basis with dividends reinvested. The indexes are unmanaged, their returns do not reflect any fees, expenses, or sales charges, and they are not available for direct investment.
