

Mid Cap Core Portfolio

Fourth Quarter 2024

Portfolio Review

The Mid Cap Core portfolio underperformed the Russell Midcap Index in the fourth quarter. Poor stock selection in information technology and poor stock selection and an overweight in industrials detracted from performance. Good stock selection and an overweight in financials and an underweight in materials contributed positively to performance.

The biggest contributors to performance during the quarter were LPL Financial Holdings and Houlihan Lokey.

- We believe LPL Financial shares appreciated based on the decreased risk of regulatory action on interest paid on client cash due to the impending change in the SEC's administration after the U.S. election in November. Additionally, the company continued to report market share gains and profit growth.
- Houlihan Lokey reported a quarter of both sales and profit growth. Broad investor outlook for capital markets activity also increased after the US general election.
- Other top contributors included AMETEK, West Pharmaceutical Services, and Teledyne Technologies.

The biggest detractors to performance during the quarter were Monolithic Power Systems and Exponent.

- While other end markets saw signs of cyclical recovery, Monolithic Power reported a deceleration in its Enterprise Data business with a sequential decline in revenues from one of its sizeable customers. Uncertainty around the level of participation in this customer's next generation products has reduced visibility into the growth profile in 2025.
- Exponent reported a quarter of slower revenue and profit growth as it exits a period of headcount reduction to match the supply of technical personnel to demand for services.
- Other bottom contributors included Cooper Companies, Universal Display, and Nordson.

Purchases and Sales

During the quarter, we purchased Universal Display and we sold Azenta.

- Universal Display is the leader in the development and manufacturing of phosphorescent organic light-emitting diode (PHOLED) emitter materials used in display and lighting applications. The company formed as an R&D start-up in 1994 with the main focus of developing and commercializing OLED technology.
- Our investment in Azenta was principally based on its cold storage business, which was highly specialized. While their cold storage unit sales have been strong, and their outsourced storage revenues have been stable and growing, an unfortunate purchase in another company has had a materially negative impact on financial results and the predictability of the business. This acquisition has drained management's time and focus despite not being central to the operation. Given that we were unclear of how the cold storage company fits into the long-term strategy and competitive protections of Azenta, we exited our position.

Outlook

As we look to 2025, we continue to believe it is impossible to predict the unfolding economic outlook. We do see improved business confidence following the results of the election. The labor market remains solid, although not heated; new hires and job openings continue to be strong and the unemployment rate is still low. Corporate debt levels are slightly above long-term averages but appear manageable. Still, inflation has not been completely tamed. We have seen incremental strength in prices, most notably in the services sector production. This presents some challenges as the U.S. economy is driven more by services than goods production. To reach the Fed's 2% inflation target, we will need to see a softening in services prices. At the Federal Reserve's December meeting, the decision to cut the fed funds rate by 25 bps was "finely balanced" — several members of the Fed now see the current policy rate as being much closer to neutral (neither restrictive nor stimulative) than when cuts began in September 2024. To us, this indicates the need to keep expectations in check regarding forecasts for rate cuts in 2025.

Largest Market Cap—3-Year Avg.	\$43.1 B	\$70.2 B
Annualized Standard Deviation—Since Inception [§]	15.1%	17.5%

*KAR utilizes the interquartile method when calculating Debt/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics. Debt/EBITDA utilizes net debt for the calculation.

[†]Dividend yield is a financial ratio that shows how much companies have paid out in dividends in the most recent year relative to their stock price at the end of such year. Dividend yield is being shown here as a characteristic of the stocks held in the portfolio and not to infer how the stocks have or will perform, as dividends are not the only component of the portfolio's performance. Dividends are subject to change from year-to-year, and the portfolio's dividend yield could be lower or higher in future years.

[‡]Free cash flow data is as of September 30, 2024. Prices are as of December 31, 2024. Excludes financials.

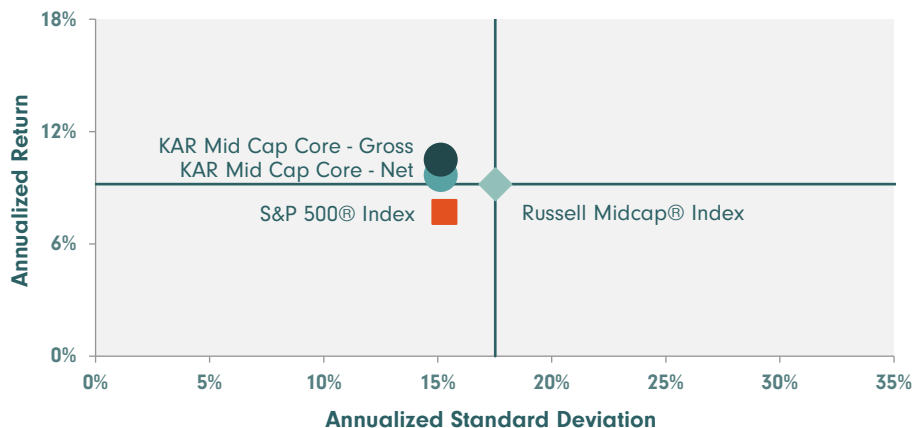

[§]January 1, 2000. Standard deviation for the KAR strategy is based on net-of-fee returns. This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

[‡]Net of all fees and expenses. Assumes a 0.75% annual fee. Fees presented on the Disclosure page could vary from the assumed fee in the net-of-fee calculation, as actual fees paid by a particular client account differ depending on a variety of factors including, but not limited to, business unit and size of mandate. The fee used on the Disclosure page utilizes an assumed maximum fee across the firm's business units, which is further detailed on that page.

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Returns of the Kayne Anderson Rudnick composite are final. For further details on the composite, please see the disclosure statement in this presentation. Data is obtained from FactSet Research Systems and is assumed to be reliable. **Past performance is no guarantee of future results.**

Peer Comparison Chart

Ten Years Ending December 31, 2024

● KAR Mid Cap Core ● Russell Midcap[®] Index

The eVestment Mid Cap Core Universe includes 46 managers categorized in the mid cap core asset class by eVestment. KAR does not pay any fees to be included in the eVestment Mid Cap Core Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2023.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Mid Cap Core Composite has had a performance examination for the period from January 1, 2000 through December 31, 2023. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the

firm defines as high quality.

The composite includes all fully discretionary institutional and pooled Mid Cap Core Portfolios. Mid Cap Core Portfolios are invested in equity securities with market capitalizations consistent with the Russell Midcap® Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell Midcap® Index. The Russell Midcap® Index is a market capitalization-weighted index of the 800 smallest companies in the Russell 1000® Index, which comprises the 1,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is January 2000. The composite was created in January 2000. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

The model management fee used for the net returns in this table is 1.30% for all periods presented. The standard Institutional management fee schedule currently in effect is as follows: 0.75% for the first \$25 million; 0.65% on the next \$25 million; 0.55% on the next \$50 million; 0.50% on the balance. The maximum Wealth Advisory Services Fee in effect is 1.30% for all assets, which breaks out as follows: 1.00% for the first \$3 million; 0.80% on the

next \$2 million; 0.70% on the next \$5 million; 0.60% on the balance; with an additional 0.30% for any assets invested in separately managed accounts strategies. The standard investment advisory fee schedule currently in effect for clients not engaging in Wealth Advisory Services is 1.00%. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using gross returns) and the benchmark for the 36-month period.

GLOSSARY

Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Information Ratio:** The information ratio (IR) is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **Downside Capture Ratio:** A statistical measure of an investment manager's overall performance in down-markets. It is used to evaluate how well an investment manager performed relative to an index during periods when that index has dropped.

Tracking Error: The divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. It is reported as a standard deviation percentage difference, which reports the difference between the return an investor receives and that of the benchmark they were attempting to imitate.

INDEX DEFINITION

The Russell Midcap® Index is a market capitalization-weighted index of medium-capitalization stocks of U.S. companies. The index is calculated on a total return basis with dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
