

Small Cap Core Portfolio

Fourth Quarter 2025

Portfolio Review

The Small Cap Core portfolio underperformed the Russell 2000 Index in the fourth quarter. Poor stock selection and an underweight in health care and poor stock selection in communication services detracted from performance. Good stock selection in consumer discretionary and industrials contributed positively to performance.

The biggest contributors to performance during the quarter were Jack Henry & Associates and Landstar System.

- Jack Henry & Associates reported better-than-expected quarterly results and management discussed increased opportunities for new core wins.
- Landstar's operating results were in line with previous quarters, but investors have become more hopeful that the trucking environment is improving.
- Other top contributors included RBC Bearings, LCI Industries, and FTI Consulting.

The biggest detractors from performance during the quarter were Rightmove and BancFirst.

- Shares declined due to concerns that generative AI could eventually disrupt Rightmove's competitive position.
- Operating results were in line with previous quarters, but BancFirst and its peers were under pressure due to fears that recent high-profile bankruptcies were indicative of credit issues within the community banking sector.
- Other bottom detractors included CorVel, Primerica, and Manhattan Associates.

Purchases and Sales

During the quarter, there were no new purchases. We sold FactSet Research Systems. We sold our position in FactSet due to lower confidence in the company's competitive position caused by the evolution of AI and its enabling of alternative tools, which we believe FactSet may have difficulty matching as AI continues to develop.

Outlook

The fourth quarter was marked by a mix of speculative rallies and shifting sector leadership, with small cap equities and certain segments like biotech drawing notable investor attention. While these trends highlight a strong appetite for risk, the underlying environment remains complex. Tariffs and restrictive immigration policies continue to influence business costs and labor market dynamics, with delayed impacts on pricing and productivity beginning to surface.

On the risk side, the evolving political climate—particularly with the upcoming U.S. midterm elections—may affect market sentiment and policy direction. Trade tensions between the U.S. and Latin America remain a concern, and stress in the private credit market, highlighted by recent bankruptcies, points to potential vulnerabilities. Structural shifts in immigration and labor markets could also create headwinds for growth.

At the same time, several supportive factors are emerging. Lower interest rates, anticipated faster earnings growth, and the potential for a federal stimulus package in 2026 provide a constructive backdrop for markets. Notably, oil prices are down approximately 20% compared to the same period last year, helping to counterbalance other inflationary pressures. Artificial intelligence continues to be a major theme, driving significant investment and innovation.

In this environment, we believe maintaining a disciplined and diversified approach is essential as we navigate both the risks and the opportunities ahead.

Annualized Standard Deviation—Since Inception§	15.5%	19.3%

*KAR utilizes the interquartile method when calculating Debt/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics. Debt/EBITDA utilizes net debt for the calculation.

†Dividend yield is a financial ratio that shows how much companies have paid out in dividends in the most recent year relative to their stock price at the end of such year. Dividend yield is being shown here as a characteristic of the stocks held in the portfolio and not to infer how the stocks have or will perform, as dividends are not the only component of the portfolio's performance. Dividends are subject to change from year-to-year, and the portfolio's dividend yield could be lower or higher in future years.

‡Free cash flow data is as of September 30, 2025. Prices are as of December 31, 2025. Excludes financials.

§April 1, 1992. Standard deviation for the KAR strategy is based on net-of-fee returns. This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

[‡]Net of all fees and expenses. Assumes a 0.90% annual fee. Fees presented on the Disclosure page could vary from the assumed fee in the net-of-fee calculation, as actual fees paid by a particular client account differ depending on a variety of factors including, but not limited to, business unit and size of mandate. The fee used on the Disclosure page utilizes an assumed maximum fee across the firm's business units, which is further detailed on that page. To the extent actual performance results are shown in comparison to an index, the index is not actively managed, does not reflect the deduction of any investment management or other

Peer Comparison Chart

Ten Years Ending December 31, 2025

● KAR Small Cap Core ● Russell 2000® Index

The eVestment Small Cap Core Universe includes 141 managers categorized in the small cap core asset class by eVestment. KAR does not pay any fees to be included in the eVestment Small Cap Core Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2024.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Small Cap Core Composite has had a performance examination for the period from January 1, 1999 through December 31, 2024. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-

income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all discretionary institutional and pooled Small Cap Core Portfolios. Small Cap Core Portfolios are invested in equity securities with market capitalizations consistent with the Russell 2000® Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Index. The Russell 2000® Index is a market capitalization-weighted index of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is April 1992. The composite was created in April 1992. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

The model management fee used for the net returns in this table is 1.30% for all periods presented. The standard Institutional management fee schedule currently in effect is as follows: 0.90% for the first \$25 million; 0.80% on the next \$25 million; 0.70% on the balance. The maximum Wealth Advisory Services Fee in effect is

1.30% for all assets, which breaks out as follows: 1.00% for the first \$3 million; 0.80% on the next \$2 million; 0.70% on the next \$5 million; 0.60% on the balance; with an additional 0.30% for any assets invested in separately managed accounts strategies. The standard investment advisory fee schedule currently in effect for clients not engaging in Wealth Advisory Services is 1.00%. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using gross returns) and the benchmark for the 36-month period.

GLOSSARY

Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Information Ratio:** The information ratio (IR) is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **Downside Capture Ratio:** A statistical measure of an investment manager's overall performance in down-markets. It is used to evaluate how well an investment manager performed relative to an index during periods when that index has dropped. **Tracking Error:** The divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. It is reported as a standard deviation percentage difference, which reports the difference between the return an investor receives and that of the benchmark they were attempting to imitate.
